INFO

Senior SRE & DevOps Engineer with 6+ years of expertise in multi-cloud infrastructure, high-availability container orchestration (EKS/GKE), and advanced platform observability. Proven track record in designing auto-scaling runner fleets, enterprise CI/CD pipeline engines, and custom quality gate integrations. Focused on system reliability, distributed tracing, and developer velocity.

SKILLS

CI/CD

Jenkins JCasC ArgoCD Fastlane GitLab GitHub Actions (ARC)

Cloud

AWS Alibaba Cloud Digital Ocean GCP

Containerization

Docker Kubernetes Docker Swarm Helm

Monitoring

Prometheus Grafana New Relic ELK Stack Loki Tempo

IaC & Automation

Terraform Ansible Packer Rundeck

Databases

PostgreSQL MongoDB Redis Elasticsearch Kafka MySQL ClickHouse

API Management

Kong API Gateway

EMPLOYMENT

Site Reliability Engineer, PT. Lion Express

2025-02 — Present

Managed the reliability, high availability, and cost efficiency of multi-cloud infrastructure (AWS & GCP) hosting core logistics microservices. Led large-scale cloud migrations, architected automated runner fleets, and standardized continuous delivery platforms to guarantee platform uptime and optimize developer productivity.

- Zero-Downtime Cloud Migration: Led and successfully executed the end-to-end migration of 100% of core production microservices and databases from GCP to AWS with 0% downtime (zero service interruption).
- GitHub Actions Scale Sets (ARC): Architected and deployed GitHub Actions Runner Controller (ARC) on AWS EKS to manage auto-scaling self-hosted runner fleets, reducing pipeline build wait times by 40% and optimizing runner cost efficiency by 30%.
- Jenkins-as-Code (JCasC): Standardized CI/CD pipelines utilizing JCasC configurations, improving pipeline deployment speed by 25% and integrating automated Lighthouse performance quality gates directly into the runner runtime.
- Distributed Observability: Deployed Grafana Tempo distributed tracing stack with AWS S3 storage backend across all environments, reducing Mean Time to Resolution (MTTR) by 50% for production incidents.

Lead SRE/DevOps Engineer, PT. Komunitas Anak Bangsa

2022-11 — 2025-02

Directed GitOps adoption, mobile application deployment workflows, and secure multi-cloud architectures. Managed relational/NoSQL databases and messaging brokers while driving platform observability and technical strategy across the SRE team.

- ArgoCD GitOps Adoption: Led the adoption of GitOps practices using ArgoCD, improving configuration synchronization speed by 35% and eliminating deployment drift across dev, staging, and production environments.
- Mobile CI/CD with Fastlane: Built automated CI/CD pipelines for Android/iOS apps utilizing Fastlane, cutting mobile release cycle times by 50% and integrating automated QA testing.
- Secure Alibaba Cloud VPC: Designed a secure VPC and corporate network architecture on Alibaba Cloud with Pritunl VPN integrations, securing internal platform communication for 50+ active engineers.
- Platform Observability Stack: Revamped cluster-wide monitoring using Prometheus, Grafana, and New Relic, increasing proactive incident detection rates by 40%.

DevOps Engineer, PT. Harmonix Teknologi Peentar

2019-10 — 2022-11

Orchestrated container workloads, continuous integration engines, and centralized logging stacks. Spearheaded cloud migrations and infrastructure performance tuning to optimize costs and availability.

- AWS Cloud Migration: Led the successful migration of legacy on-premise infrastructure to AWS, improving application response times by 30% while maintaining 99.9% system availability during the transition.
- Container Orchestration: Containerized and orchestrated 30+ core microservices using Docker Swarm and Kubernetes, improving overall cluster resource utilization by 25%.
- CI/CD Optimization: Revamped Jenkins and GitLab CI pipelines, reducing software release deployment cycles by 70% (accelerating releases from weekly to daily deployments).
- Observability Setup: Deployed centralized logging and APM monitoring via ELK Stack and New Relic, improving system diagnostics speed by 45%.

System Administrator, PT. Harmonix Teknologi Peentar

2018-10 — 2019-10

Administered corporate networks, Linux/Windows servers, user credentials, and security policies. Established initial systems monitoring and detailed technical documentation.

- Infrastructure Availability: Maintained 99.95% service uptime across Linux and Windows Server environments, managing firewalls, backups, and user access.
- Proactive System Monitoring: Built and configured early-stage server monitoring utilizing Grafana and ELK Stack, reducing hardware incident resolution times by 30%.
- Technical Documentation: Authored and updated 50+ technical SOPs and infrastructure topologies, reducing new SRE/IT member onboarding times by 40%.

Freelance DevOps Engineer, buyback.ai

2021-08 — 2022-08

Designed, migrated, and deployed scalable database nodes and high-availability application environments on modern cloud infrastructures.

- Cloud to Cloud Migration: Spearheaded the seamless migration of application nodes and MySQL databases from DigitalOcean to AWS, boosting overall database query speeds by 35%.
- AWS Elastic Beanstalk: Deployed and scaled high-availability application workloads on AWS Elastic Beanstalk, improving overall service availability by 20% under peak user traffic.

WORK PREFERENCES

Worksites: Remote, Hybrid, Onsite

Employment Type: Full-time

Location: Jakarta, Indonesia

EDUCATION

Indraprasta PGRI University

Bachelor of Informatics, FMIPA

2010-01 — 2015-01
